

POLY-FIBER PEOPLE

She loved that little airplane, took it away from her brother when she was six. When she was twenty, school kids cheered when she landed at small fields, come to show slides, talk about flying, and make little girls think, “I can do that!” In 1930 she invented an airplane radio gadget, and Air Radio Inc. sponsored her in several races.

In her later years she wrote flying books for kids and championed women in aviation. She retired to a cottage on a small grass field somewhere in Florida. She restored a '27 Waco 9, and *still* took it around the patch even when she was... well, we promised not to tell her age.

Happy landings, Dorothy...
Miss Air Radio.
