

NEW IRON CALIBRATION THERMOMETER 2022

Please note that we are now supplying the Taylor Classic 5911N thermometer in place of the Taylor #3510 for calibrating irons. List price listed on our Poly-Fiber 2022 price list for the #5911N thermometer.

Calibration is still accomplished with silicone heat sink as described in our Poly-Fiber, Ceconite, and Star Gloss procedure manuals. The only difference is that when laying the thermometer on the stack of paper towels, it helps if the large thermometer head is over the edge of the table surface so that the thermometer stem is flat rather than at an angle.
